

Procedures for accessing the Naval Year 2000 Tracking System (NY2KTS) FTP Site

The Naval Year 2000 Tracking System (NY2KTS) has a FTP site which is used to upload and download data files, documents, and other Y2K associated files. The site is located at the Naval Air Warfare Center - Aircraft Division, Patuxent River, MD and is hosted by the Information Management Department (IMD). Access to this site is restricted as it requires a valid username and password to log on and this site is available for official Government use only. This document contains the necessary information to log on and navigate through the various directories. However, this document will not provide the necessary username and password to access the system. You must contact either the DON CIO Y2K Program Manager, CNO Y2K Project Office, or NAWC-AD to obtain this information.

To access the NY2KTS FTP Site you must use a File Transfer Protocol (FTP) software package that will allow download/upload capabilities. The examples provided in this document are obtained using FTP Software from OnNet Technologies. Screens and options may vary depending upon the actual software used by the end user. Most users will only have the ability to download files from the server and you will not be able to upload any files unless you have been authorized to do so by the NY2KTS Development Team located at NAWC-AD. If you require help to access this site please contact the NY2KTS Help Desk at (301) 342-3104, or (888) 292-5919, or via the web at <http://calltracker.nawcad.navy.mil> for more information.

Once you run your FTP Software, you will need to establish a connection to the FTP site using the following Domain Name or the IP address of the server:

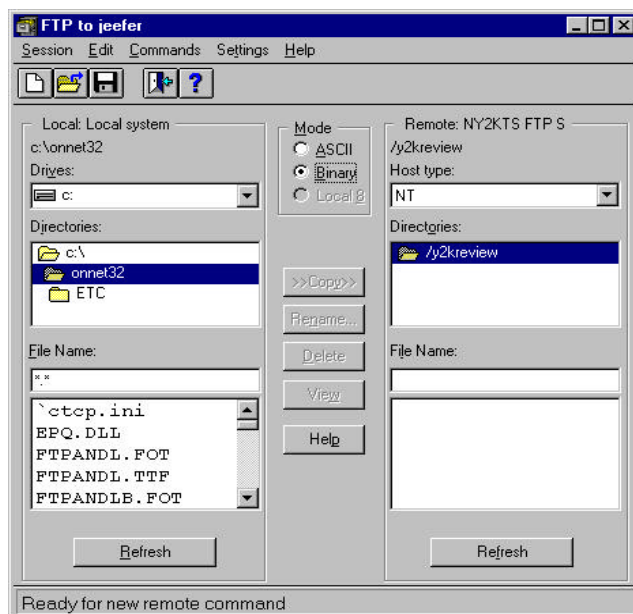

Domain Name

Jeefer.nawcad.navy.mil

IP Address

198.97.72.252

Once connected the server will prompt you to enter a username and password. You must obtain these from the offices identified above. Once you have logged on to the FTP server, you will see a window similar to the one below. This will allow you to select file(s) to upload/download, be sure to select the BINARY file transfer mode before transferring any files.

You may then select any of the files to download from this point. Remember only authorized users may upload files to the FTP server, but ALL users can download files from this site.
